

Pathology past, present, and future

I would like to extend my sincere gratitude to Dr. Jason Karamchandani for his service as President of Canadian Association of Pathologists (CAP-ACP) and for the direction, leadership, and strong vision he brought to the role that will continue to shape the organization well into the future. In mid-June, we were fortunate to welcome Dr. Monalisa Sur as the new President. Our very best wishes to her as she begins her term. We look forward to her guidance and leadership.

At the recent CAP-ACP AGM, we had the privilege of celebrating the many achievements of Dr. Richard Fraser, including his inspiring dedication and commitment to education, pathology, and medical history. His moving talk as the Director of the Maude Abbott Medical Museum (MAMM) at McGill University and his dedication to preserving our Canadian medical history reflects only some of the many contributions that made him a deserving recipient of the 2026 President's Award. If you are in Montreal, this November, for the 2026 ASCP & CAP-ACP

Annual Scientific Meeting, I strongly recommend visiting the MAMM. Reflecting on our medical journey truly deepens our understanding of past challenges and better positions us for the future.

In keeping with this ongoing pursuit of knowledge, I welcome you now to read the two articles in this current issue. In the first you will examine the pilot implementation of residents' rounds and explore an innovative approach to pathology education. The second manuscript will broaden your understanding of passenger lymphocyte syndrome, a rare complication of solid organ transplantation.

As always, my sincere thanks to our authors, reviewers and the dedicated CJMS team.

Mariya Kuk MD, FRCPC
